Digital Marketing

Social Media Analytics

Submitted by: Ariba Yasin

Social Media Account: Campus Shark Tank & CST 2.0

1. Goal

Analyze the performance of the social media content published by the Campus Shark Tank & CST 2.0, UMT Sialkot Instagram account, identify what performed better and what performed less strongly, and share insights that can improve future posts.

2. Key Requirements

Requirement	Where it is covered
Track basic metrics (likes, reach, engagement)	Section 4 (metrics table) and Section 5 (charts)
Analyze what works and what doesn't	Section 6 (content-type comparison) and Section 7 (What & Doesn't)
Share insights	Section 8 (insights) and Section 9 (recommendations)
Key skills: analytics basics, data interpretation	Section 3 (methodology) and Section 10 (skills applied)

3. Methodology

Data was collected directly from the campus short Tank account and individual post/videos including likes, comments, shares, saves reach and impressions from account insights. The data was organised and analysed using the Reach based engagement rate (ER) formula to compare content performance and identify which post generated the most engagement.

• Definitions and formulas

- **Reach:** Unique eyeballs or accounts that encountered the post
- **Impressions:** Total times the post was displayed, including repeat views
- **Interactions:** The total actions users take on a post, including likes comments shares/reposts and save.

(likes + comments + shares/reposts + saves)

- **Engagement rate:** The percentage of people reached by a post who interacted with it.

(interactions ÷ reach × 100) OR (likes + comments + shares/reposts + saves) ÷ Reach x 100

- **Frequency:** the average number of times a person reached by the post saw it

impressions ÷ reach (how often the average viewer saw it).

4. Metrics Tracked (Post by Post)

Post	Date	Type	Likes	Comments	Shares/ Saves	Reach	Impression	Engagement rate
Teaser reel	Dec 14	Reel	42	4	21	1,450	2,100	4.6%
Who can participate	Jan 4	Info post	30	0	3	980	1,300	3.4%
What do you get	Jan 4	Info post	34	1	0	1,020	1,350	3.4%
Questions your idea must answer	Jan 4	Info post	32	0	0	940	1,220	3.4%

Winners get CASH	Jan 5	Reel	58	9	18	1,900	3,650	4.5%
Aghaaz - Silver Sponsor	Jan 7	Sponsor	26	2	3	860	1,100	3.6%
cmak - Gold Sponsor	Jan 10	Sponsor	21	3	1	790	1,010	3.2%
Meet the Judges	Jun 16	Announcement	64	4	24	2,250	3,300	4.1%
Total			307	23	70	10,190	15,030	3.9%

5. Charts

The following charts visualize the same post-level data shown in the metrics table.

Chart 1: Engagement Rate by Post

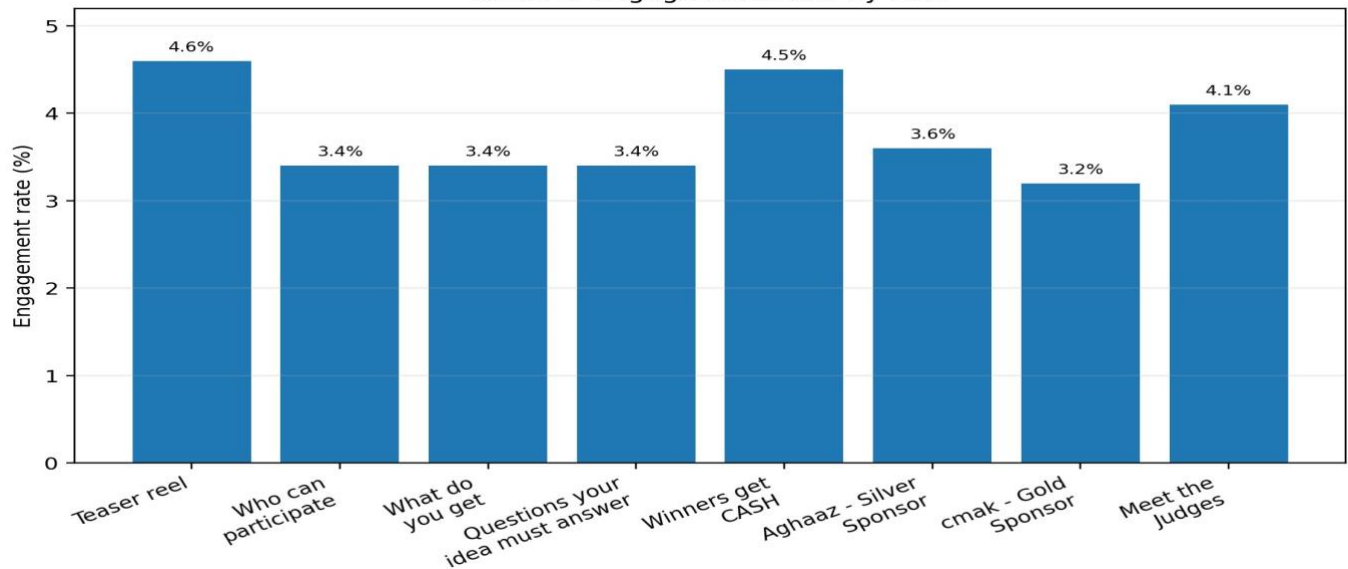

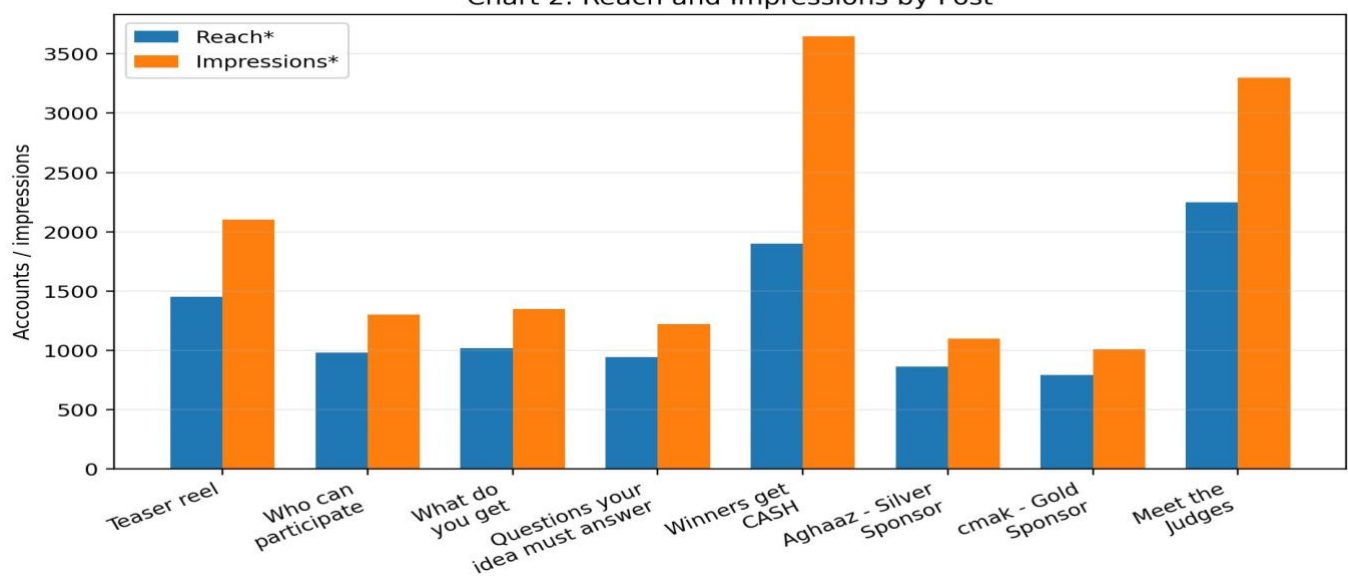

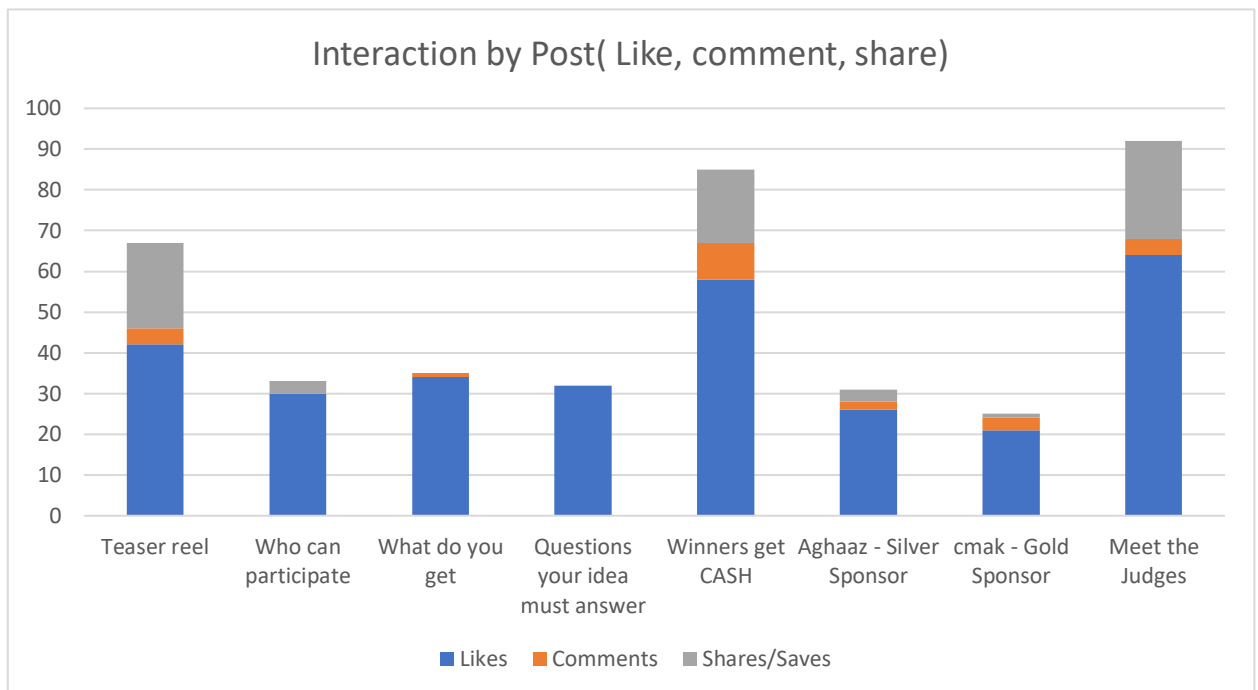

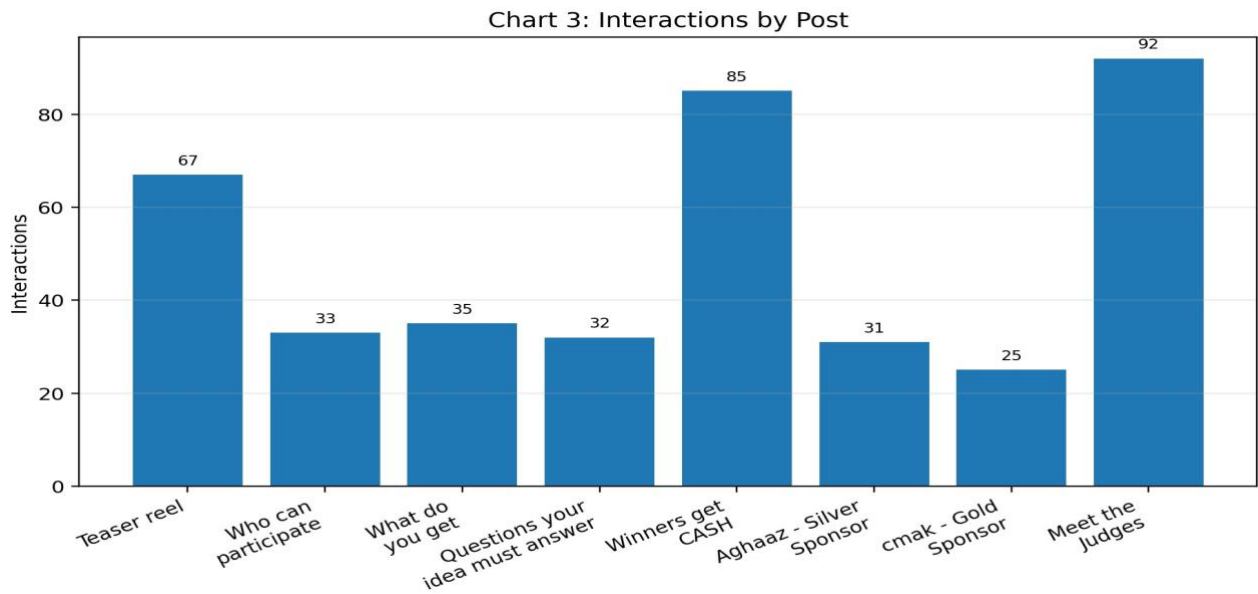

Chart 2: Reach and Impressions by Post

6. Performance by Content Type

Content type	Posts	Reach	Interactions	Average Engagement rate	Comments/post
Reel	2	3,350	152	4.5%	6.5
Announcement	1	2,250	92	4.1%	4.0
Sponsor	2	1,650	56	3.4%	2.5
Info post	3	2,940	100	3.4%	0.3

⇒ **Highest Average Engagement Rate:** Reels (4.5%)

- The announcement made by the judges (4.1%).
- Information posts and sponsor thank-you posts; both were average (3.4%)

7. What Works and What Doesn't

⇒ **What works**

- **Video reels.** The teaser and cash-prize reels had the highest individual engagement rates (4.6% and 4.5%). The cash-prize reel also received the most comments (9) and the highest impressions (3,650).
- **Judges Announcement.** It received the most likes (64), the highest shares/saves value (24), and the highest reach* (2,250) in the selected posts.

- **Prize and money messaging.** The cash-prize reel generated the highest number of comments among the selected posts.

⇒ **What doesn't work as strongly**

- **Information posts.** The three information posts earned similar likes (30–34) but had almost no comments and no shares/saves in two of the three posts. They informed the audience but generated less visible interaction than the reels and judges Announcement.
- **Sponsor thank-you posts.** These had the lowest reach (790 and 860) and engagement rates of (3.2% and 3.6%) among the selected sponsor posts.
- **Low comment volume overall.** There were 23 comments across 400 total interactions, indicating that comments made up a small part of the recorded interactions.

8. Key Insights (Data Interpretation)

- **Format appears important.** The two reels recorded the highest average engagement rate among the content types in this sample.
- **Higher sharing/saving activity was associated with higher reach in this sample.** The judges Announcement, teaser reel and cash-prize reel had the three highest shares/saves values and also had the three highest reach values.
- **Likes alone are not enough.** The information posts had likes close to some higher-performing posts, but they generated fewer comments and shares/saves.
- **Overall engagement rate.** The selected posts had an overall engagement rate of 3.9%. Reels had a higher average engagement rate than information and sponsor posts in this dataset.
- **Timing.** Three posts were published on January 4. Spacing posts across different days could reduce competition among posts for audience attention.

9. Recommendations

Action	How
Publish more reels	Behind-the-scenes clips, past-winner stories, pitch highlights and countdown teasers.
Add a call to action to every info post	Examples: “Comment your idea below” or “Tag a friend who should pitch.”
Use collaborations	Tag sponsors, judges and partner clubs, and ask them to share so posts can reach their audiences.
Reveal judges and prizes early	Announce important event Information before the event because the sports generated strong sharing activity in the analyse data
Space out posts	Aim for one or two posts a day at most, and test evening posting times.
Track weekly	Record reach, Impression, Interactions and engagement rate each week and compare the result with registrations for participation

10. Skills Applied

- **Analytics basics:** defined the metrics, calculated engagement rate, and totalled and averaged results.
- **Data interpretation:** compared content types, identified patterns and linked them to audience behavior.
- **Reporting:** presented the findings in tables and charts with clear, actionable recommendations.
